

10 key benefits of a SaaS TMS solution

A SaaS TMS is a single-instance, multi-tenant environment where all supply chain partners are connected and collaborate in a secure online environment. They are quickly becoming the preferred choice in the industry by supply chain professionals worldwide. **But what are the main benefits?**

1 | Lower implementation costs

A SaaS solution is the **less expensive** option to implement. Forget about substantial maintenance costs and lengthy and potentially risky implementations.

2 | Quicker ROI

A SaaS TMS accelerates the ROI of the business case, with shorter implementation cycles and faster adoption and usage of the tool.

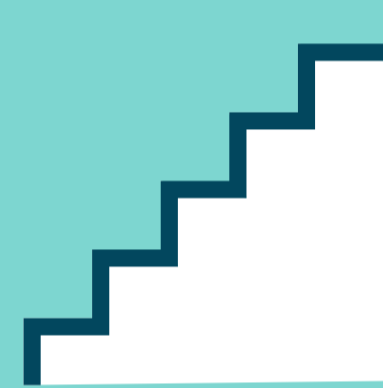

3 | Security

SaaS TMS vendors ensure a high level of security for their applications and their customers' data. They perform regular backups, ensuring data will never get lost.

4 | IT support

There is no need to worry about the development and maintenance of the solutions or rely on your internal IT department to keep the software running.

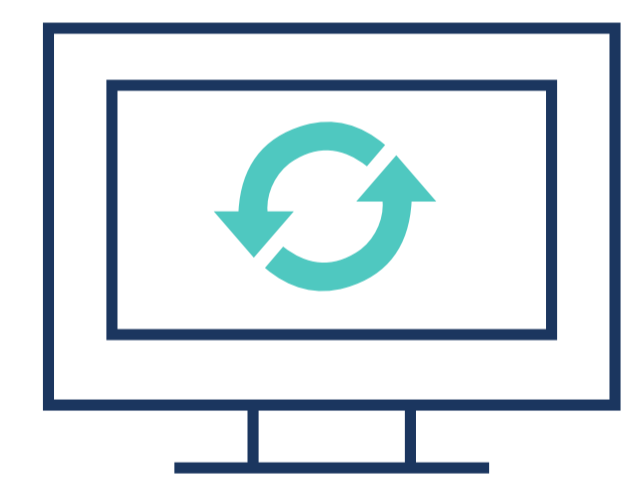

5 | Flexibility and scalability

A SaaS TMS solution can grow alongside your business, allowing you to use only the capabilities that you need and upgrade them when required.

6 | Frequent updates

It also provides a competitive edge for your business as new features rolled out frequently. You will get capabilities to tackle a new challenge much faster than if you had a fully customized solution. Providers take care of the technical maintenance and releases.

7 | Industry-leading best practices

Being part of a large community of users means that if one user has a great idea, it often gets developed and rolled out to benefit everyone.

8 | User-friendly and easy-to-use solution

SaaS solutions are easy to use and adopt within supply chain networks without disruptions. No need to be IT-savvy; SaaS is user-friendly and very welcomed by profiles with different backgrounds and skill levels.

9 | Training

You get the necessary support and training from the provider to make sure users make the most out of the TMS as soon as possible.

10 | Real-time visibility and communication

Having all partners connected in one platform allows for real-time visibility and improved collaboration between them, making sure everyone is updated.
